

ABSTRACT OF THE DISCLOSURE

Pixel units a and b each of which is formed by
arranging each one of a plurality of kinds of pixel
electrodes which display predetermined colors
5 respectively, an information signal driver 10 for
controlling information signals supplied to the pixel
electrodes, and information signal lines DB, DG, and DR
that connect outputs for one pixel from the information
signal driver 10 with the pixel electrodes (Ra, Rb),
10 (Ga, Gb), and (Ba, Bb) for the same color included in a
pair of pixel units a and b respectively in a one-to-
many relationship, are provided. The information
signal driver 10 supplies information signals for one
pixel to pixel electrodes (Ra, Rb), (Ga, Gb), and (Ba,
15 Bb) for the same color that are included in each of a
pair of pixel units.
